Dear Hiring Manager,

I hold a degree in Computer Engineering from the University of São Paulo (USP). During my journey, I have built a practical foundation combining software development, automation, and artificial intelligence, always focused on solving real-world problems.

My experience spans three years at BTG Pactual, optimizing complex workflows and leading system modernization. Over this period of intense dedication, I learned that the most crucial part of my work is thoroughly understanding an end-to-end process before writing the first line of code. I applied this same instinct and analytical rigor to my undergraduate thesis, developing a computer vision *pipeline* for ethical animal management on my campus.

I am driven more by curiosity than by routine, and I thrive on projects that force me to learn fast. I also served as an elected student representative at USP for fourteen terms, an experience that taught me to advocate for technical proposals with hard data and to pivot quickly when the evidence demands it.

I would welcome the opportunity to discuss the role in detail and explore how I can contribute to your team's success.

Best regards,

Felipi Adenildo Soares Sousa
